

# Project 1: Data Cleaning & Preparation

Change Log & Data Quality Documentation — DecodeLabs Data Analytics Internship

## Dataset Overview

Source file: Dataset\_for\_Data\_Analytics.xlsx | Total records: 1,200 orders | Columns: 14 | Date range: Jan 2023 – Jun 2025

## Change Log

| Change ID | Description                                                                                                     | Impact                                                    | Status   |
|-----------|-----------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|----------|
| CR001     | Filled 309 missing CouponCode values with 'No Coupon'                                                           | Resolved all missing values (309 -> 0)                    | Resolved |
| CR002     | Checked for exact duplicate rows across all 14 columns                                                          | 0 duplicate rows found                                    | Verified |
| CR003     | Checked for duplicate Order IDs                                                                                 | 0 duplicate Order IDs found (all 1,200 are unique)        | Verified |
| CR004     | Standardized Date column to YYYY-MM-DD (ISO 8601) format                                                        | All 1,200 dates confirmed valid, no invalid/missing dates | Verified |
| CR005     | Trimmed extra whitespace in text columns (Product, ShippingAddress, PaymentMethod, OrderStatus, ReferralSource) | 0 whitespace issues found                                 | Verified |
| CR006     | Standardized text casing to Title Case for readability (e.g. Product, PaymentMethod, OrderStatus)               | Improved consistency across 5 text columns                | Resolved |
| CR007     | Rounded UnitPrice and TotalPrice to 2 decimal places                                                            | Numeric precision standardized across 1,200 rows          | Resolved |
| CR008     | Verified TotalPrice = Quantity x UnitPrice for every row                                                        | 0 calculation mismatches found                            | Verified |

## Summary

Rows before cleaning: 1,200 | Rows after cleaning: 1,200 | Total missing cells before: 309 | Total missing cells after: 0

Verification gate for Project 2: 0% duplicate Order IDs and 0% incorrectly formatted dates — both confirmed above.
